WARNING TAPE BROCHURE

IDENTIFIABLE WARNING TAPES (DETECTABLE)

ENERMAK ENERGY Underground Marking Tapes are market leaders with their high-quality, detector-detectable type. The printed warning messages prevent ink from smudging and are resistant to acids, alkalis, moisture, and other damaging elements present in the soil.

Thus, the prints allow for complete reflection of the tape. The tape must be visible before it is read. Therefore, the warning, description, and color code appropriate to its purpose are printed in thick black letters along the entire tape. Warning tapes are printed on aluminum foil and used to detect underground cables such as electricity, water, and natural gas before they are covered, by laying them on the trench or before excavation. Due to the aluminum content, it can be easily detected above ground with metal detectors. The aluminum is laminated with polyester and polyethylene to ensure durability underground for many years. All underground marking tapes are made with extrusion lamination and 100% pigment strip color. Standard APWA color codes are used. They are sold in rolls of 300 or 500 meters and in widths of 7.5 cm, 10 cm, 15 cm, 20 cm, and 30 cm.

MATERIAL AND COLOR OPTIONS:

Production can be done in any desired width, color, and text, beyond internationally accepted colors and warning texts.

Blue, Green, Orange, Purple, Red, White and Yellow

DETECTION UNANSWERED WARNING BANDS (NON) (DETECTABLE)

Undetectable bands do not contain metal.

Due to their non-metallic nature, they can remain underground for longer periods and are unaffected by external factors.

It can be used to mark all kinds of underground installations such as electricity, telephone, clean water, sewage, gasoline, and petroleum. The warning print is in thick black lines, making it easily visible and readable. For special cases and...

We can produce according to your needs.

MATERIAL AND COLOR OPTIONS:

Production can be done in any desired width, color, and text, beyond internationally accepted colors and warning texts.

Blue, Green, Orange, Purple, Red, White and Yellow

Complies with ASTM standards. ISO 9001 quality certificate.
